![N-ABLE™]

N-able Backup

Cloud-first backup, without the cost and complexity

N-able™ Backup is designed to provide a streamlined, cloud-first data protection service for physical and virtual servers, workstations, business documents, and Microsoft 365®* data in one web-based dashboard. Backup can help reduce the cost and complexity of data protection—without sacrificing speed or reliability.Storage in our global private cloud is included.
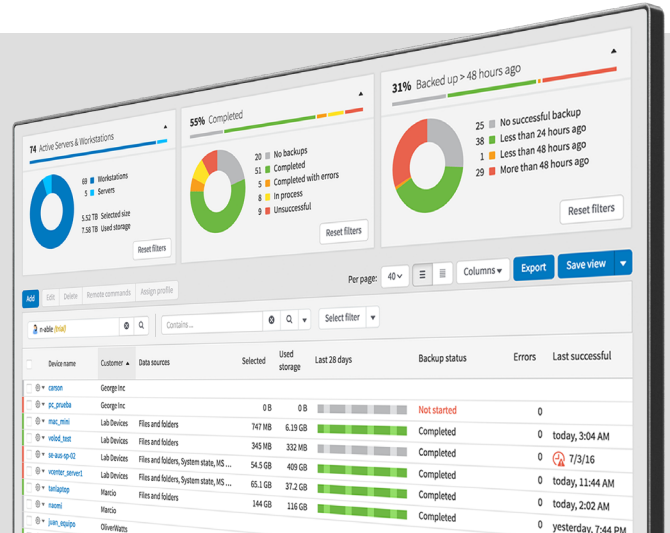

Flexible recovery options

- Get multiple recovery options from a single product, with no extra charges for different recovery methods.

- Leverage fast file- and folder-level recovery and full system recovery with bare-metal restore or virtual disaster recovery.

- Create a standby server via our continuous recovery option.

- Recover at LAN speed via the LocalSpeedVault option if needed.

- Test and verify backup recoverability on an automated schedule with recovery testing.

Built for the cloud

- Backing up to the cloud isn't an afterthought with N-able Backup; it was built for that.

- TrueDelta deduplication, compression, and WAN optimization help make daily backups fast by sending only changed bytes.

- Cloud storage (including archiving) is included at no extra charge in data centers located worldwide.

- AES 256-bit encryption protects backup files in transit and at rest.

TrueDelta technology sends a fraction of the data over the WAN during daily backups.

Define profiles for device types for auto-deployment to help save time and increase consistency.

No hardware hassles

- N-able Backup is a SaaS application—no need to install on or maintain a local application server.

- No physical appliance required, which helps save you time and money.

- No need to buy, provision, or manage local data storage for your backups. Storage in our private cloud is included.

- Keep an optional local copy of your data using an existing network share or other hardware with LocalSpeedVault.

Efficiency and ease of use

- Simplify backup management and spend less time on routine tasks.

- Manage server, workstation, document, and Microsoft 365* backups for multiple locations or customers from a single dashboard.

- Automate backup deployment with device profiles to help provide consistent configurations.

- Manage by exception with customizable views and reporting.

Features at a glance

End-to-end security

- **AES 256-bit encryption** is used to help secure files that remain encrypted in transit and at rest.

- **Create your own private key** or have one generated for you during deployment when using the standalone version. Integrated N-central Backup and RMM Managed Online Backup offer passphrase encryption.

- **ISO-certified data centers** are located worldwide, with additional certifications by location.

- **Role-level access** provided in the standalone edition of N-able Backup lets you grant limited access to backups as needed. The N-central and RMM integrated versions use each platform's access controls.

Truedelta technology

- **Byte-level change tracking** between backups helps ensure only changed data gets sent over the WAN.

- **Proprietary deduplication and compression technology** means daily backups are a fraction of the selected size.

- **WAN optimization** helps minimize bandwidth usage; bandwidth throttling is available during business hours for slow network connections.

- **Restore only what has changed** for efficient recovery.

* Backup for Microsoft 365 includes Exchange™, OneDrive®, and SharePoint data.

Microsoft 365 data protection*

(standalone and integrated into N-central)

- **Recovery** of deleted items helps you keep control of your customers' data in Microsoft 365.

- **Manage Microsoft 365 backups from the same dashboard** as server and workstation backups.

- **Up to seven years' data retention** to help your customers meet regulatory requirements.

- **Storage in our global private cloud** is included. Fair-use policies apply.*

Data centers around the world

- **Backup storage in our private cloud** is included in your price.

- **More than 30 data centers** to choose from, located across four continents.

- **ISO 27001, ISO 9001,** and other certifications depending on your chosen data center.

- **Using one vendor** for your backup software and cloud storage simplifies billing and support.

Backup data is stored in worldwide data centers built for security and regulatory compliance.

* Backup for Microsoft 365 includes Exchange™, OneDrive®, and SharePoint data.

*Fair use policy includes up to 1TB of Microsoft 365 data per unique user.

Supported operating systems

Windows®	7, 8, 8.1 and 10
Windows Server®	2008 SP2, 2008 R2, SBS 2011, 2012, 2012 R2, 2016 (limited), Windows Server 2019 (limited)
macOS®	10.10 Yosemite 10.11 El Capitan 10.12 Sierra 10.13 High Sierra 10.14 Mojave 10.15 Catalina
GNU/Linux®	CentOS 5, 6, 7 Debian 5, 6, 7, 8 OpenSUSE 11, 12

Data sources for backup

The Backup Manager handles individual files and directories as well as complex systems, such as:

- Microsoft SQL Server®
- VMware®
- Microsoft Hyper-V®
- Microsoft Exchange™
- Oracle®
- MySQL®

You can also back up and recover the configuration of your **operating system** (the "System State" data source) and Microsoft 365. The N-central integrated version also supports Microsoft 365 data protection.

Please view data sources documentation for system compatibility details.

* Backup for Microsoft 365 includes Exchange™, OneDrive®, and SharePoint data.

Additional features

Available on all supported operating systems

- **Multilingual support.** You can use the Backup Manager in any of these seven languages: English, Dutch, Russian, German, Spanish, French, or Portuguese.

- **Optional custom branding.** When using the standalone edition, you can brand the Backup Manager for your end users, removing references to N-able. Use a custom name, logo, color scheme, and icons.

- **Remote management.** You can send remote commands to the Backup Managers on your end users' devices.

- **Proxy connections.** The Backup Manager can work from behind a proxy server.

- **Email reports.** Receive email updates on status or recent backup and recovery sessions. This action can be done by an end user in the Backup Manager or remotely by a service provider or a system administrator.

- **Bandwidth usage control.** Help ensure your bandwidth usage never exceeds a specified limit.

Management Console (Web) Backup Manager	https://backup.management/
	Client-side backup application available in English, Dutch, Russian, German, Spanish, French, Portuguese, and Norwegian
Virtual Drive	Optionally installed with the Backup Manager, this allows self-service access to backed-up data via a local file browser
Recovery Console	Multi-instance recovery tool for setting up proactive or on-demand data recovery from servers and workstations to any location
Bare-Metal Recovery	Create bootable USB or CD media to recover your system directly to bare hardware without a prior OS installation
Server Tool	Self-service tool for managing seed uploads or downloads from almost any location
Storage Node Installer	Optional installer for a self-hosted storage node

"Simple to use, enterprise-class features, very fair on the storage limits, and no gimmicks. 24/7 support. Above all, I saved a client's burning building with this backup service. You can schedule backups nightly, twice a day, or down to every hour if you choose"

– Jeff Olejnik
Newport Solutions

"It's crazy how little data is sent in daily backups using N-able [Backup]. We're backing up GBs of data, yet by using the LocalSpeedVault and TrueDelta, we're only transferring a couple of hundred MBs. Backups that used to take eight hours are now complete in ten minutes."

– Kyle Orr
