Increase efficiencies and reduce overhead cost with a management platform purpose-built for today's IT service provider.

IT professionals face the most challenging and complex security environment the industry has ever seen. Yet the need to find efficiencies, to deliver more value with fewer resources, remains a critical concept for a profitable business. Other endpoint solutions require solution providers to work with siloed tenant data, creating unnecessary complexity that raises costs, slows deployment, lowers productivity, compromises performance, and ultimately blocks the path to new value.

As the only solution of its kind designed specifically to meet the needs of solution providers, **VIPRE Site Manager** is the industry's best-of-breed choice for delivering and managing advanced endpoint protection services in a multi-tenant environment.

VIPRE Site Manager provides a full-featured centralized multi-site management portal for solution providers that also features advanced analytics to automate much of the service delivery process. Unlike other solutions on the market, which tend to require labor-intensive management, VIPRE provides transparent multi-tenant management and visibility across the entire client base and automatically surfaces the issues that require attention. The classic site management capabilities are there—site creation, modification, deletion, and monitoring—but serve merely as the foundation on which an enhanced value platform has been created.

VIPRE Site Manager: Designed to let service providers do more with less.

- Provide the most advanced security for your clients
- Serve more clients, more efficiently
- Increase value for your customers and your business

Key Benefits of VIPRE Site Manager

Increased Profitability

Client level reporting helps you deliver greater value to your customers and users. Save time and reduce impact on IT staff with automated processes and malware determinations. Simple monthly utility billing with provider usage reports. Demonstrate service value by delivering regular threat report summaries to clients.

Better Security

Advanced threat intelligence with machine learning. Award winning malware protection from industry independent testing agencies. Powered by AWS to deliver the most reliable and secure endpoint security platform.

Faster Incident Response Time

Respond to ransomware breakouts like WannaCry across all managed clients at the same time. VIPRE Site Manager notifications quickly show visibility to determine if a threat is isolated or part of a larger outbreak.

Endpoint security that protects against modern threats.

VIPRE products defend against evolving threats without compromising the needs of today's businesses. Global-scale attacks and modern malware are raising the bar substantially for endpoint security solutions to provide functional protection against modern malware. Powered by next-generation advanced machine learning, one of the world's largest threat intelligence clouds, and real-time behavior analysis, VIPRE protects against ransomware, zero-day attacks, fileless malware, phishing, exploit kits and mobile threats, which are techniques attackers are using the most.

Decrease endpoint complexity and increase efficiencies.

IT environment complexity is a major challenge for solution providers and requires the need to identify what complexities to avoid. Challenges come in many forms such as deployments that leave gaps in coverage, poorly designed consoles or too many screens to manage, creating complexities that lead to poor admin experiences and day-to-day operational inefficiencies. VIPRE endpoint delivers unrivalled visibility into the health status of hosts in real-time, enabling less time spent troubleshooting and maximizing overall efficiency, while providing automated workflows and interactive problem exploration to accelerate the ability to fix issues in the environment. **VIPRE Site Manager** can be purchased, configured and sites deployed in a matter of three clicks and less than 10 minutes, making security simple by designing clear, easy-to-understand policies and configuration settings.

A trusted technology partner with a strategic vision.

Founded in 1994, VIPRE is a leading provider of advanced security products purpose-built to protect every major attack vector from today's most costly and malicious online threats. We offer flexible cloud configurations for rapid, affordable deployment, plus native mobile interfaces that enable instant threat response— anywhere, anytime. Add in our consistently high ratings from the world's most widely-trusted independent testing labs, and it's no wonder that millions of global users depend on VIPRE for a complete approach to cybersecurity.

VIPRE Site Manager eases the pain of traditional endpoint management with a modern, innovative platform design built from the ground up, including feedback from actual solution providers.

VIPRE Site Manager Testimonials

VIPRE MSP Partner

"I like that VIPRE Site Manager doesn't make a lot of unnecessary noise. It's straight forward and alerts me when I need it. The site manager makes it easy to separate out my customers which makes administration easier and quicker."

Chuck Flagg
President and CEO
Orion Technologies

VIPRE MSP Partner

"VIPRE Site Manager is easy to use and doesn't require a lot of technical training to get up and running. The UI is clean and the ability to drill down and quarantine on my cell phone is amazing".

Robert Siemons
CEO
Rain Networks
